

Airworthiness Safety Policy

Airworthiness Safety Policy

The Policy of our company Copper & Optic Terminations Ltd is to provide and maintain a workplace that manufactures, Inspects, and tests, products to customers design drawing definitions and associated specifications.

The Management team are committed in ensuring all employees working on aerospace products have sufficient experience and appropriate training and all tooling, fixtures and measuring equipment is to customers and Industry standard requirements, is safe to use and calibrated to National Standards where required.

As part of the Management Commitment to Airworthiness Safety it is a prime objective of the company to retain accreditation and comply with the AS9100 Procedures and associated specifications, along with any Customer specific requirements.

Only parts that conform to the customers design definition or industry standard parts shall be purchased from approved distributors and manufacturers, who hold as a minimum a quality management system accreditation to ISO 9001, ensuring full traceability for make-up and origin of components.

The Company operates a no blame culture and encourages everyone to be vigilant and highlight to Management anything that may have an effect on Airworthiness Safety, this includes methods of manufacture, operator errors, lack of training or evidence of processes or procedures not being followed including any suspect unapproved parts that are received.

This Airworthiness Safety Policy encompasses the requirements and legislation for Quality, Health & Safety, Conflict Minerals, Code of Conduct & Business Ethics, Environmental, Customer and Government, and it is the duty of everyone in the Company to work to these rules and regulations.

Overall responsibility for this Airworthiness Safety Policy rests with the person below.

A handwritten signature in black ink, appearing to read "Philip Latham", written over a dotted line.
